ZipLink Internet is excited to announce SafeNetProtect

SafeNetProtect is a new internet service that helps keep your family safe while online, for as little as $18 per year based on service level. SafeNetProtect adds a layer of protection against malicious sites known to cause issues like malware, phishing and cyber-attacks.

This service uses DNS filtering through a 3rd party which helps to prevent network connected devices from communicating with undesirable systems out on the internet. We offer 3 levels of service:

Level 1 Threat Protection $1.50/mo	Protect your users and your networks from online security threats by instantly blocking known malicious websites with web security filtering policies. Protect against command and control (botnet) attacks, malware, phishing, Anonymous Proxies, Spyware, Parked Domains, Hacking, and Ransomware. The threat management technology is constantly updated many times per day to help protect against zero day attacks and new vulnerabilities.
Level 2 Threat Protection and Mature $2.50/mo	Everything in Level 1 plus protection from Adult, Gambling, Pornography, Violence, Dating, Drugs, Alcohol, and Discrimination/Hate type sites. Site lists updated many times per day as well to keep up with the rapid change in internet content.
Level 3 Custom control $3.50/mo + $25 setup	Everything in Level 2 plus you have the ability to login and control individual Security, Mature and Enterprise sub categories as well as white list and black list sites of your choosing. In addition, you will have access to reports and other settings. Once we set you up, you will be sent access and full control of your filtering choices.

Setup is very easy, just send an email to billing@ZipLinkInternet.com and let us know which level you would like and it will be added to your monthly service. **SIMPLE**, and we mange everything else on our side.

After receiving confirmation that the new service has been added to your account, you are all set. No logging in to your router or custom setting on your computers. As long as you are using your ZipLink Internet service at your home/business, you will be protected.[1] This applies to all devices using the service and your router - computers, phones, tablets, TVs, etc.

[1] After enabling the service, it may take up to 24 hrs. for your router and computers to "forget" previously accessed internet sites. This service should be considered an additional level of security and control to protect your users and should be used in addition to any other security software, firewalls, or other mechanisms already in place.
